

Assembly Instructions

Attach QuikClip® to the Bridle Loop.

For light to medium wind conditions, attach only one set of SkyTails® to the center loop located at the bottom of the kite.

For strong wind conditions, attach SkyTails® to outside loops also located at the bottom of the kite. As shown on front of package.

For storage, fold kite neatly and wrap SkyTails® around to prevent tangles.

Flying Instructions

Always select a flying field that is wide open to provide the best flying conditions.

With your back to the wind, hold up to catch wind and release line slowly. Every now and then a gentle tug will help your kite climb.

In light wind, have a friend hold your kite downwind about 75 feet / 22.9 m. Have your friend release the kite, then quickly pull in the line hand over hand to gain altitude.

Kite Safety

Never fly near tall buildings or trees.

Never fly over people.

Never fly near an airport.

Never fly in thunderstorms.

Never fly near busy streets.

Never fly near overhead power lines. Never try to retrieve your kite from power lines. Call your local power company for assistance.

WARNING!
Do not fly near overhead power lines.
