2. Insert the Top left and right Spreaders into the Top Connector

3. Insert the Bottom left and right Spreaders into the Bottom Connector

4. Unwind SkyTails®. For more stability, tie them together

5. Attach QuickClip® to Bridle Loop. Top Loop: For Light to Medium Wind

Flying Instructions

1. Always find a location that is open and free of buildings or trees.
2. With your back to the wind, release your kite into the air.
3. Let the line out slowly while occasionally tugging to gain altitude.
4. For an assisted launch, have a friend hold your kite 75 feet / 22.8 meters downwind and release your kite.
5. Pull in line to gain altitude and release slowly for more distance.

Kite Safety

Never fly near tall buildings or trees.

Never fly over people.

Never fly near an airport.

Never fly in thunderstorms.

Never fly near overhead power lines. Never try to retrieve your kite from power lines. Call your local power company for assistance.

Never fly near busy streets.

WARNING!
Do not fly near overhead power lines.
